

The Aatel Difference

Since our inception in 1947, Aatel has been a family-owned and operated business focused on providing our customers with unique and customized solutions.

We measure our success by the value we bring to you. And we ensure we deliver on this value by partnering with key suppliers and service providers that share our passion and dedication to customer satisfaction.

Our Life Safety solutions complement our other services, including AV, Communications and Security, making Aatel a unique systems integrator.

Peace of mind you can count on...

Safeguarding the Workplace

Offer your residents, patients and staff a more appealing living and working environment. By monitoring patient activity, residents are able to roam your facility freely and in privacy while inhibiting their access to restricted and unsafe areas. The safety of newborns can be enhanced in much the same way, thus preventing abductions and mismatching.

Staff can better monitor the activities of residents and patients through the use of these patient wandering/abduction systems, providing additional safeguards to potential emergencies. Real-time locating systems can also be used to track and monitor your assets, thus preventing damage, theft and unsupervised use.

Improved Communication

In the event of an emergency, a Life Safety system can enhance the speed and effectiveness of your communications. By integrating your fire, security, emergency communications and Life Safety systems into a single point of control, you'll be better able to identify and manage problems, improving your response times and helping you return to normal operations more quickly.

By alerting staff members more swiftly, you can better manage staff duress situations resulting from patient abuse, minimizing your risk. By optimizing system performance and functionality, you can enhance your Life Safety and property protection programs.

Better Customer Experience

The safety of your people and customers is something that's very important to you. Putting the right safety measures in place requires implementing the right technology solutions and systems. Life Safety systems can provide you with a competitive advantage by making you more efficient and effective, more customer-focused and ultimately more profitable.

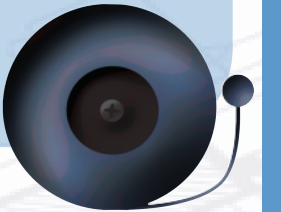

Why Aatel?

We offer a wide array of services, enabling us to deliver superior customer service by providing customized solutions to fit your needs.

Enhanced Productivity & Cost Savings

A properly configured Life Safety system can assist facility and safety personnel by managing multiple sites from one central location. Similarly, efficiencies can be gained through remote diagnostics of fire alarm systems and other remotely managed services, such as video surveillance and two-way audio systems.

Problems can be diagnosed proactively by remotely viewing the status of your fire alarm system. This will result in increased system uptime due to reduced service calls and repairs, saving you money while providing better protection.

Experienced Systems Integrators

Integrating your Life Safety systems into your existing IT infrastructure is no simple task. It requires selecting a qualified systems integrator who is able to merge these two systems to function optimally while also getting the most out of your current technology investment. Choose an experienced service provider who can get it right – the first time.

There's a great need for the patient wandering program, given that the number of people living with dementia on the rise.

-Gale Carey, CEO, Alzheimer Society of Ontario
